Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-11 and 21, drawn to methods of biological assay and detection of a microorganism, classified in class 435, subclass 24.
- II. Claims 12-20, drawn to a protease substrate, classified in class 530, subclass 300.

The inventions are distinct, each from the other because of the following reasons:

Inventions II and I are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the peptide product of Group II may be used in various assay methods such as ELISAs, Westerns, etc. Because these inventions are distinct for the reasons given above, have acquired a separate status in the art as shown by their different classification, and because the search for the product of Group II does not require a search for the method steps of Group I, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
